

Services Cary, Wilmington and Surrounding Areas

Microdermabrasion

Microdermabrasion is more affordable than cosmetic surgery and does not require anaesthetics. It is a painless procedure that helps your skin look younger, healthy, glowing and for some people, close to perfect. Microdermabrasion is a simple, straight forward procedure that revitalizes dull skin, reduces large pores, erases fine lines and minimizes wrinkles. It reduces acne scars, pigment irregularities (hyperpigmentation) and age spots. **\$55 (three person minimum)**

Ultrasonic Microdermabrasion Facial

Ultrasonic vibrations penetrate deep into pores and hair follicles to break up old, dead cells, secretions and oily blockages. Skin metabolism is increased, which causes waste products to be removed more rapidly and effectively. Ultrasonic waves prepare your facial skin for the safest, non-painful, non-invasive exfoliation process available, which is Microdermabrasion. Microdermabrasion can improve the appearance of acne-prone or blotchy skin, fine scars or wrinkles, milia or sebaceous hyperplasia, and minimize enlarged pores. Sun damaged skin or uneven texture will also improve as a result of microdermabrasion treatment. The need for extractions is greatly reduced, which will reduce pore size. **\$85 Wilmington Only**

Botox/Dysport

BOTOX® Cosmetic is a prescription medicine that is injected into muscles and used to improve the look of moderate to severe frown lines between the eyebrows, forehead, and crow's feet in people 18 to 65 years of age. The medication is injected with a fine needle, is virtually painless, and dramatic effects are visible within 3-10 days. Effects last approximately 3 months. **\$10/unit**

Dermal Fillers (Juvederm, Restylene, Perlane®)

Jaesthetics offers filler treatments to enhance your beauty and help restore a youthful appearance. Cosmetic dermal fillers containing hyaluronic acid are injected to soften wrinkles and facial folds in patients for lip augmentation, facial depressions, and facial scarring. Hyaluronic acid fillers supplement the body's natural supply, which becomes depleted with age. The filler products are biodegradable so effects last 12-18 months and gradually fade away unless touch-up treatments are performed to maintain desired effects. **\$450 per syringe (1 mL)**

Latisse

Latisse solution is an actual growth treatment that is FDA approved to clinically grow eyelashes. It is only available by prescription. Latisse is a once-a-day treatment applied topically to the base of your upper eyelashes. More length may be seen in as little as four weeks and full growth is achieved in 16 weeks. The product grows lashes longer, fuller, and darker. **\$95**

Obagi

Obagi has developed clinically-proven skin health products and systems primarily for the dermatology, plastic surgery and related aesthetic markets. Using its Penetrating Therapeutics™ technologies, the company's products are designed to improve penetration of prescription and cosmetic agents across the skin barrier for common and visible skin conditions in adult skin including premature aging, photodamage, hyperpigmentation (irregular or patchy discoloration of the skin), acne, sun damage, rosacea and soft tissue deficits, such as fine lines and wrinkles. **25% off retail-please inquire for list of products and pricing**
